

Key Benefits of Goliath PVC Roofing Systems

Designed to support long-term building performance

Why Building Owners Choose Goliath PVC

Goliath PVC roofing systems are designed to provide reliable performance in demanding commercial and industrial low-slope roofing applications. By combining heat-welded seams, waterproofing performance, and environmental resistance, Goliath PVC provides a roofing solution built for long-term building protection.

Heat-Welded Seams

- Fused watertight seams
- Consistent seam performance
- Can be tested and verified during installation

Lightweight Roofing Membrane

- PVC is one of the lightest roofing applications
- Helps minimize roof loading

Ponding Water Resistance

- Designed to perform in low-slope roofing applications where water may remain on the roof for extended periods
- Supports consistent waterproofing performance

Long-Term Waterproof Performance

- Designed for commercial and industrial low-slope roofing applications
- Supports reliable building protection

Chemical Resistance

- Resistant to many chemicals, oils, and greases commonly found in commercial and industrial environments.
- Suitable for facilities with rooftop exhaust systems and industrial contaminants

Fire Resistance

- Self-extinguishing PVC roofing membrane
- Helps support fire protection and roof performance
- Ideal for roof areas where waterproofing and durability are essential
